## Importance of FDP

Intellectual Property (IP) is one of the most important assets for research institutes or industries. Therefore, it is critically important to identify it, document it, protect it and in some cases, register it. All of this activity takes a team of technical writers, technology managers, and executives. They collectively ensure things don't fall through the cracks as there is much to keep track of. Good IP management also requires the development of a strategy in order to balance the cost involved in registering IP against the protection that will be required in markets you are in or plan to develop. This FDP includes experts from Academics and Industries who are directly or indirectly involved in IPR Management at their level.
